## Not Too Late to Order

Seed oats, barley, alfalfa, clovers and grasses can usually be shipped the same day the order is received. Corn, soybeans, sudan, sorghum and most other items are also ready for prompt shipment.

Freight delivery will get most seeds to you on time but for small orders that are needed in a hurry parcel post or express is quicker and often less expensive. Nearly all seeds are reaching their destination in good condition and in a shorter time than for the past several years.

### Soybeans

Inoculation, necessary if beans are to add nitrogen to the soil, is furnished without additional charge. Recommended leading varieties are offered and quoted at prices under those of February. We have talked with a number of growers and handlers and still feel good seed beans are not too plentiful.

Hay beans should be drilled solid at about two and one-half bushels per acre for fine stemmed quality hay. The yellow kinds can be planted in rows with 45 to 60 pounds of seed per acre yielding as much or more than two bushels drilled solid.

### Seed Corn Supply

Most varieties are available in both flat and round kernels and are ready for immediate shipment. You can indicate a second choice or we will write if unable to supply the hybrid you select.

The seed is carefully graded, high in germination and treated. In appearance and quality all is very good except several of the earlier hybrids that, because of last year's abnormal season, are not quite as bright and attractive. Regular prices apply to less than bushel orders.

### Sudan Grass

The demand for Sweet Sudan has increased rapidly. Those using it claim it gives more late summer and fall grazing and that livestock like it better than regular sudan. When using either one seed as shallow as possible at about 20 pounds per acre. Sudan can be pastured in 6 to 8 weeks after seeding and will produce large amounts of pasture or hay.

Certified Williams Cane is available for those interested in making sorghum syrup.

### Weed Control

Modern Weed Control is discussed in "Crop News and Views," a copy of which is enclosed. We hope you will find it interesting and not too hard to read. Maybe some of the unsightly and troublesome weeds can be killed this year. Directions should be closely followed. Write if you have questions or want more information about seeds, farm crops or weed killing materials.

# TREATED HYBRID SEED CORN

SCOTTS Hybrid Corn has been graded for width, length and thickness and will plant easily and accurately in any make of planter. It is treated for protection against disease. The round kernels are graded uniformly and will yield just as well as the flats but special plates are usually required for accurate planting. These plates are available for most standard planters.
